

UK Job Market Intelligence

SQL Analysis — Findings Report

Yogalakshmi Shanmuga Jothi

Dataset: Jobs in Data (Kaggle) — 9,355 postings | Tools: PostgreSQL, Neon

Key Numbers at a Glance

Finding	Key Number
Most hired role	Data Engineer — 2,195
Data Analyst postings	1,388 globally / 85 UK
Entry level salary	\$88,535 avg
Entry to Senior jump	+\$74,000
Job growth 2020-2023	10,392%
Best company size	Medium — 8,448 roles
Highest paying setting	In-person — \$155,524

All 12 Findings

FINDING 1 — Top Job Titles

Data Engineer is the most in-demand role with 2,195 postings, followed by Data Scientist with 1,989. Data Analyst ranks third with 1,388 — confirming strong demand for the role I am targeting.

FINDING 2 — Experience Levels

Senior roles make up 72% of all postings. Entry-level has 496 roles with an average salary of \$88,535. The jump from entry to mid-level adds \$29,000 — making early experience the highest-return investment a junior analyst can make.

FINDING 3 — Locations

United States dominates with 8,132 roles. United Kingdom is second with 449 — the highest in Europe. Germany has 72, France 50, Netherlands 21. For European job searching, UK is the clear primary market, with Germany as the strongest continental option.

FINDING 4 — Salary by Job Title

AI Architect is the highest paying role at \$250,328 average. Data Analyst averages \$109,911 across 1,388 postings — a strong mid-range salary with a clear upward path into ML and management roles that pay \$180,000+.

FINDING 5 — Remote vs In-Person

In-person roles pay the most at \$155,524 average — challenging the assumption that remote means higher pay. Remote averages \$144,996. Hybrid is significantly lower at \$88,912. Location flexibility does not guarantee higher salary.

FINDING 6 — Sectors

Data Science and Research is the largest sector with 3,014 roles. Data Analysis — my target sector — is third with 1,457 roles at an average salary of \$108,506. Machine Learning and AI pays the most at \$178,926 despite being fourth in volume.

FINDING 7 — Salary Progression

Entry-level roles average \$88,535. Mid-level adds \$29,000, Senior adds a further \$45,000. The total journey from Entry to Senior represents a \$74,000 salary increase. Early career investment in skills and experience has the highest financial return.

FINDING 8 — Demand Over Time

Data job postings grew from 71 in 2020 to 7,453 in 2023 — a 10,392% increase in three years. Average salary grew 47% in the same period from \$105,879 to \$155,133. Entering this field now is well timed.

FINDING 9 — Company Size

Medium sized companies dominate hiring with 8,448 roles and the highest average salary at \$152,237. Large companies have 748 roles at \$141,097. Small companies have fewest roles at 159 and lowest salary at \$90,643. Target medium sized companies first.

FINDING 10 — Employment Type

Full-time roles dominate with 9,310 postings and the highest average salary at \$150,630. Contract pays less at \$117,109 with only 19 roles. Part-time and Freelance pay significantly less. Full-time permanent roles are clearly the best target.

FINDING 11 — UK Market

In the UK specifically, Data Engineer leads with 119 roles followed by Data Analyst with 85 roles at an average salary of \$88,412 (approx. 70,000 GBP). Analytics Engineer pays the most in the UK at \$156,072. As a UK based job seeker targeting Data Analyst roles, the market is active and the salary is strong.

FINDING 12 — Entry Level Categories

Data Science and Research has the most entry-level roles with 164 postings. Data Analysis is second with 140 roles but at a lower average salary of \$69,962. For someone entering as a Data Analyst, 140 entry level roles exist — a healthy market.

Built while actively job searching in the UK data market. I did not just read about the job market — I analysed it.
